

PREPAR3D®

Dear Customer,

Thank you for purchasing an **A2A Simulations** Accu-Sim add-on for Lockheed Martin® **Prepar3D®**. Please take a few moments to read these notes before you install this product.

## Installation

Your zipped download contains an installer which will install this product in the **64-bit Version 4** of Prepar3D. For Prepar3D v4, we've followed Lockheed Martin's preferred method of installation outside of the Prepar3D v4 folder. The default installation folder is in 'C:\Users\[UserName]\Documents\Prepar3D v4 Add-ons' but you may select another directory or drive if you wish. If this download is a new copy of a product you've installed before, please make sure you uninstall the old version before you install this one.

We always ensure that there's no risk to your system or privacy posed by any of our software. Our installers are checked on VirusTotal.com and tested against a range of antivirus engines. However, antivirus heuristics change daily so unfortunately we can't guarantee that false positive detections won't occur. Please feel free to contact us as described below if you have any concerns about antivirus software alerts.

## Pilot's Manual and Configurators

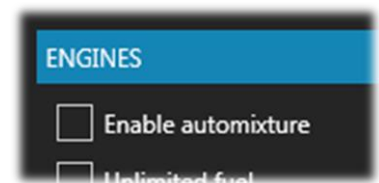

Your pilot's manual is available from the 'A2A Simulations' group within the Windows Start Menu.

It contains a quick-start guide which describes which settings in Prepar3D should be reviewed to get the best from your product. For example, it's important that the 'enable automixture' option is **not** ticked. Please be sure to visit the final section of the manual too, it contains information about A2A's **Custom Control Panels** which can be opened with the Shift-2 through

Shift-9 key combinations. These allow you to refuel, inspect, maintain and modify your Accu-Sim airplane.

Also available from the Start Menu are shortcuts to the **Aircraft Configurator** which enables you to select options such as add-on GPS software you may own, and the **Input Configurator** which you can use to assign custom control functions to your hardware. Finally, the **Check For Updates** shortcut ensures you'll always have the latest features and fixes.

## Online Support and the A2A Community

At A2A Simulations we're very proud of the 25,000+ member online community which has grown around our products since 2004. Comprised of flight simmers, pilots, instructors and, of course, the A2A developers and support team, our forums are a friendly place to contact us and get technical support. You're also welcome to visit us just to discuss flight simulation and aviation.
