

Pushback Truck for 787-8 Dreamliner

Setup:

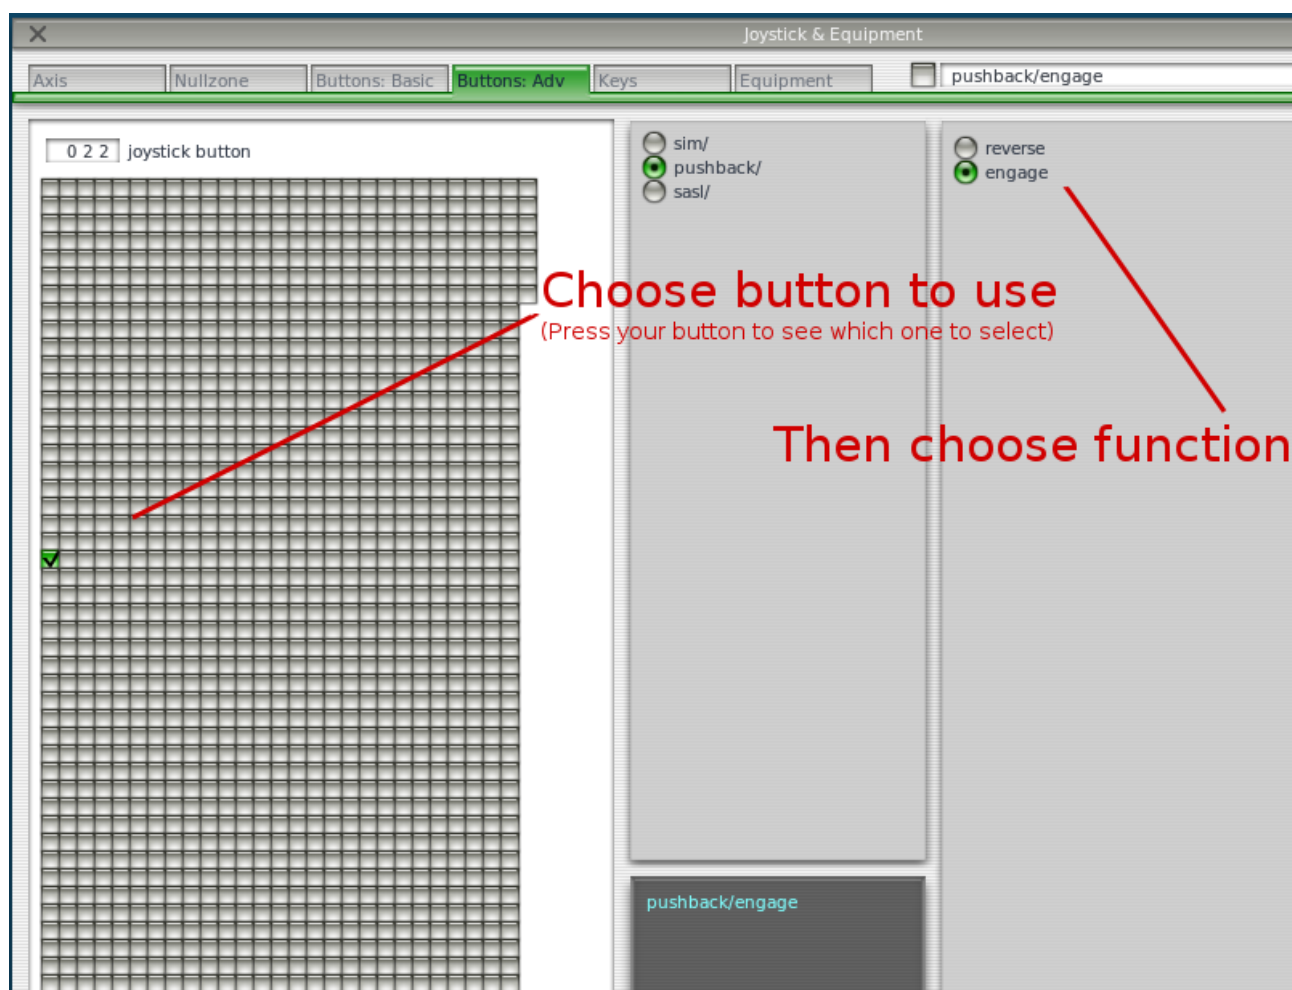

First, you need to assign buttons to activate and control the direction of the pushback truck. Open the Advanced Buttons menu (Settings – Joystick & Equipment – Buttons: Adv tab)

Open 'custom commands from plugins':

Select the 'pushback' folder, then click 'Open'.

Then choose your buttons, and assign one to each of the functions, 'engage', and 'reverse':

How to use:

- Press the button assigned to 'Engage' to be pulled forward, or 'Reverse' for pushback. This will cause the push back truck to appear, and drive up to connect to the nosewheel.
- The throttle now controls the pushback (or pull) speed. Increase throttle to begin pushing back.
- To steer, use your rudder control.
- If starting in reverse, press the button for 'Engage' to move forwards. If moving forward, press the button for 'Reverse' to push backwards.
- To disengage, press the 'Engage' button again if pulling, or 'Reverse' if pushing. Truck will disconnect and drive away.
