Tram Simulator Düsseldorf

Drive on the
original track U78
with the high
detailed tram -
Includes Modding-
Editor

www.pegi.info

Play, share and modificate Mods created by yourself or by friends

Created mod projects are stored in the “Custom”-folder of the program folder of Tram Simulator (usually it’s C:\Users\Username\...\TramSim\TramSim_Dussel_Data\Custom\).

To share your project with friends or the community, just send the project xml file, which is located in the “Custom”-folder, to your friends. They have to store it in their “Custom”-folder.

To play the mod just start the Tram Simulator, choose "Start game" and then "Mods". Choose the mod which you have stored in the “Custom”-folder and it will be loaded.

To modificate a mod, just start the Tram Simulator, choose “Editor mode” and then “File” and “Load”. Choose the xml file which you want to modify and choose “Load”.
