

Hello!

First of all we'd like to say thank you for the purchase of one of our high quality products. We hope that you will enjoy our work just like we did while creating our product for you.

Since the days of Railworks and Trainsimulator 2012 we've been creating scenarios for your simulation experience. Trains and Drivers has a growing and satisfied customership and we hope you'll be part of this great community, too.

Sincerely,

Andreas Czudai

-Trains and Drivers-

SUPPORT

In case you need support for one of our products, please make sure that you include as many informations, screenshots (if possible) and exact details about the issue you have to make sure we can provide fast help!

Please send any support issues to: info@trains-and-drivers.net

Thank you!

SYSTEM REQUIREMENTS

[Train Simulator](#)

Routes / Strecken:

- New York – New Haven
- Northeast Corridor

Rollingstock/ Rollmaterial:

- Acela Express Add-On
- Metro-North Kawasaki M8 EMU Add-On

The listed addons (routes, rollingstock, engines, etc.) are **not part of this product** and may be purchased seperately. You will find more information about how to purchase these addons by visiting our website. The product site of this addon holds a list with all needed addons. (Select the tab named: System Requirements) This list is hyperlinked so you can jump directly to the website of the selected addon by clicking on it's name. **Note that Trains and Drivers is not responsible for the availability of any linked website and we cannot support any 3rd party products**

INSTALLATION

- Download your product using the downloadlink provided in your eMail
- Unzip the .zip-file into a place where you can easily access it. We recommend unzipping it to your desktop.
- Double-click the unzipped .exe-file provided with your download.
- Choose your language for the installation. The language setting you use here is not affecting the language settings of the scenarios or Trainsimulator 2014, this selection is only valid for the installation process itself.
- Follow the instructions during the installation program runs.

Note: The installer tries to install your addon into the default installation position of Train-simulator 2014. Trainsimulator 2014 normally resides in the following folder:

„DriveName:\Steam\steamApps\common“.

If your Steam installation is not located at the default place, you will have to enter the correct path to your „railworks“ folder manually.

Examples:

- C:\Steam\steamApps\common\railworks
- E:\Games\Steam\steamApps\common\railworks
- K:\MyGames\Steam\steamApps\common\railworks
- G:\Steam\steamApps\common\railworks

(These examples may not reflect the path used on your specific computer system)

In case the entered path is not correct, the installation will ask for a new folder to be created, in this case click „No“ as this indicates that your program will not be installed properly. Enter the correct railworks path instead.

DEINSTALLATION

If you ever need to uninstall your program, follow these instruction:

- Click on the Windows Icon in your taskbar
- Choose: All Programs
- Select the Trains and Drivers folder
- Click on the uninstaller-icon of the product you want to uninstall.

YOUR SCENARIOS IN TRAINSIMULATOR 2014

When you start Trainsimulator 2014, you will see the main menu. Select „DRIVE“ and then „STANDARD“. You can now choose from all routes you have installed. Select the route you want to drive on and on which you have installed Trains and Drivers scenarios.

You will see a list with all scenarios that are available for this route. The Trains and Drivers scenarios are named in this scheme: „TaD – product name – scenario name.“

TROUBLESHOOTING

- The scenario fails to load and shows an error message saying:

„Can´t load railvehicle XYZ...“

This has something to do with your installed rollingstock. If you don´t match the requirements of the addon and rollingstock is missing, you will see this error message.

In some cases this is just a cache problem which can be solved by clearing the cache of the game:

Main menu/Game settings/Tools/Clear Cache

THE SCENARIOS

- **The NEC Series 3 - Snowy commute**

It's a very cold and snowy morning and you are in charge of a limited service between Harrison and Grand Central Terminal.

- **The NEC Series 3 - The Yankee Clipper**

Drive the game special train from Yankee Stadium to Stamford on a rainy afternoon. This is a direct service that connects the Yankee Stadium with Stamford and New Haven during game days. The train departs 20 to 30 minutes after the end of the game and only discards passengers at each station. For this reason there isn't a timetable to stick to, but try to be as quick as possible, to avoid disruption of other services.

- **The NEC Series 3 - Night Train**

It's late in the evening and you are in charge of one of the last outbound trains to New Haven.

- **The NEC Series 3 - New Haven Express**

This is a commuter train full of people willing to get home as soon as possible. Drive the train until its final destination, New Haven Union Station.

- **The NEC Series 3 - Morning train to New York**

Take command of the Metro North 1555 in a full run from New Haven State Street to Grand Central Terminal. Starting at New Haven State Street, you will stop at every station until Stamford, where you will couple with train 1755 coming from New Canaan. Together you will continue towards New York.

- **The NEC Series 3 - The New Canaan Branch**

Drive an early morning commuter train from New Canaan to New York. This is one of the first Metro North trains originating from New Canaan and it's full of commuters that need to get to New York on time. Be on time at every stop!

- **The NEC Series 3 - Morning outbound**

Drive an early morning train to Stamford. This is one of the first morning trains and runs from Grand Central Terminal to Stamford. It's peak hour so there is some traffic on the line.

- **The NEC Series 3 - Afternoon stopper to the Big Apple**

Today you will drive the stopper from Stamford to New York. It's peak time on the outbound track so there is quite some traffic.

LICENSE AGREEMENT

You may use our products on your home computer system and you are allowed to make a backup-copy for your own personal use.

You may not: distribute, sell or share our products without permission from Trains-and-Drivers.

We do our best to make sure that our products will run properly on our customers systems, but because of the variety of system configurations, AddOns installed and software running on our customers systems, we cannot guarantee that our product will run smoothly on every computer.
